Meeting Notes March 13th

Thursday, March 13, 2025   3:41 PM

Tool revisions:
- List of updates, turn it into a summary report of some kind?
- Something that a risk assessor can read and be given a general run down.
- Take sentences that refer to patching from the NIST 800-53 R5 and use that relevant data to train models?

How to fix our tool:

1) Assign someone to design a general report layout
2) Try feeding the AI model more NIST documents
3) Slate will research more about RAG and see if it is simple to give it that 500 page document
4) Ripken looking into feeding the AI a report format?
5) How we will carry out development
6) Making the AI tool scale

Ripken - front end adjustments / RMF research

Slate - RAG and feeding it more documents

Colson - work on making the tool scale

Jonathan - research document layout / moving files to teams

Re-group with client early into Spring Quarter
